Selectors
$('Element Selector**')**
just like CSS!

jQuery Event functions
Selector.Event();
Attach an event listener to a particular selector.

ready();
click();

jQuery functions

Effects
Selector.Effect();
Performs some effect to the selected element.

fadeIn();
toggle();

CSS
Selector.CSS()
gets the current style property or sets the current style property of selected element.

css();
addClass();

Manipulation
Selector.Manipulator();
gets the selected element or sets the content based on the location of the selected element.
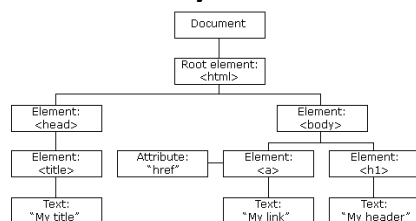

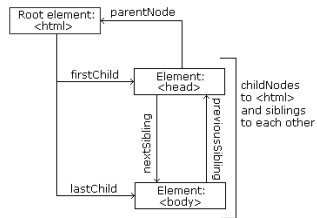

.html();
.attr();
.text();
.append();
.before();

DOM
Document Object Model

Node Parents, Children, and Siblings

Traversing
Selector.Traverser();
Gets the element(s) based on the relationship and location of selector.

parent();
children();
siblings();

Form Submission
Captures the submission of a form to alter state of data before submission. Important to understand for AJAX!

.submit()
.serialize()

```
('form').submit(function(){
   console.log($(this).serialize());
})
```
